(I) and (II) are useful in the manufacture of a medicament for treating or preventing a condition (e.g., meningitis) associated with infection by Neisseria or Gram-negative bacteria. The product is useful for veterinary treatment and in a screening assay for the identification of an antimicrobial drug. The vaccines have prophylactic applications. AAU72911-AAU73014 represent N. meningitidis virulence proteins of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                           A method has been developed of expressing a glycosyltransferase in a host cell. The method comprises introducing into the host cell a nucleic acid encoding the glycosyltransferase and incubating the host cell under conditions appropriate for expression of the glycosyltransferase, where the host cell substantially lacks a protease that cleaves polypeptides between two consecutive positively charged amino acid residues. The glycosyltransferase can be used in in vitro production of oligosaccharide structures which are potential therapeutic agents for use in the manipulation of cell-cell recognition events, particularly adhesion of bacteria and viruses to mammalian cells and leukocyte-endothalial cell interaction through selectins in inflammation. The method provides more readily recoverable active glycosyltransferases than prior art methods involving mammalian glycosyltransferases. The present sequence represents a C-terminal peptide from Neisseria
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Expressing high levels of glycosyltransferases - comprises use of either host cells deficient in proteolytic enzymes or modified glycosyltransferase genes deleted in a proteolytic recognition site

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to the genomic sequence of Pyrococcus abyssi (see AAF86431 and AAH41223-7) and P. abyssi proteins. P. abyssi is a hyperthermophilic archaeon, which is isolated from deep-sea hydrothermal vents. The present sequence is one such P. abyssi protein. The proteins of the present invention have various potential industrial uses, since the proteins are stable at very high temperatures, some up to 110 degrees centigrade.

Note: This patent is in the same patent family as WO200065062, which contains additional sequences as shown in AAB99132-AAB99143, AAH75903-AAH75920 and AAG66436.

The EPS CD plasmid is about 32 kb in size and encodes at least 13 active genes. CC The enzymes encoded by these genes allow the bacteria to produce an CD exopolysaccharide, designated EPS352. When EPS352 is expressed in or CD can be compared to milk, it imparts highly desirable sensory characteristics to CD compared to milk, including making the milk very thick, with a very smooth CD compared to the milk very thick, with a very smooth CD compared to the milk very thick, with a very smooth CD compared to the milk very thick of the CD compared to the CD compared to EPS352 biosynthesis. L. lactis cremoris Ropy352 is convolved in EPS352 biosynthesis. L. lactis cremoris Ropy352 is CD compared with the USDA-ARS-NCAUR-NRRL as deposit accession number CD compared to the CDA-ARS-NCAUR-NRRL as deposit accession number CD compared to the CDA-ARS-NCAUR-NRRL as deposit accession number CD compared to the CDA-ARS-NCAUR-NRRL as deposit accession number CD compared to the CDA-ARS-NCAUR-NRRL as deposit accession number CD compared to the CDA-ARS-NCAUR-NRRL as deposit accession number CDA-ARS-NCAUR-NRRL as deposi

                                                                                                                                                                                                                                                                                                                                                                                                                                                 analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a protein described in the exemplification of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel polynucleotides derived from Coryneform bacteria, for identifying mutation point of a gene, measuring expression of a gene, analysing expression profile or pattern of a gene and identifying homologous gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          C
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       16-DEC-1999; 99JP-0377484.

                                                                   AAY54065-74 represent enzymes involved in the biosynthesis of CC exopolysaccharides (EPS). These enzymes are designated EPS1-EPS10. and CC exopolysaccharides (EPS). These enzymes are isolated CC are encoded by open reading frames eps1-eps10. The enzymes are isolated CC from Streptococcus thermophilus strain Sfi39. The proteins are used CC in a method for the synthesis of EPS, which includes at least one step CC of forming a bond (alpha or beta-isomer) between C-1 (carrying the creducing aldehyde function, of an activated D-galactose pyranose), and CC a phosphate on a lipophilic or proteinaceous primer. Stepwise synthesis CC of EPS occurs with, in each step, addition of a new sugar unit, through CC its hemi-acetyl function, to an alcoholic hydroxyl of a second sugar CC unit, present at the end of a chain of sugar residues bonded to the CC primer. EPS1 to EPS4 are used to elongate the EPS chain, and to regulate CC EPS production, EPS5 creates new bonds between saccharides, EPS6 is used in the biosynthesis of EPS, EPS7 and EPS8 are beta-glycosyltransferases, CC conversion of a pyranose form of a beta-p-galactose to the furanose

AAY43767-76 represent the proteins encoded by the eps operon of Streptococcus thermophilus Sfi39. The operon contains 10 open reading frames, and encodes enzymes (eps1, eps2, eps3, eps5, eps6, eps7, eps8, eps9 and eps10) that are involved in the biosynthesis of exopolysaccharides (EPS). The enzymes catalyse the formation of specific intersugar bonds. The enzymes catalyse a process that includes at least one step of forming a bond (in alpha or beta anomeric form) between C1, carrying the reducing aldehyde group of an activated D-Galp (galactose in pyranose form), and a phosphate group on a lipophilic or proteinaceous primer. The enzymes are used to produce EPS that have antitumor or probiotic properties or are used in foodstuffs to improve
                                                                                                                                                                             Claim 3;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      eps3; eps4; eps5; eps6; eps7; eps8; eps9; eps10;

PmCS catalyses glycosaminoglycan polymerisation to produce chondroitan: a linear polysaccharide which has viscoelastic properties which makes it useful for a number of applications. Chondroitan can be used with hyaluronic acid (HA) to coat medical devices e.g. catheters ar sensors to reduce tissue abrasion. In addition, they can be used as bioadhesives for haemostatic sealing and healing of wounds and surgical incisions; and as biomaterials that provide sustained delivery of encapsulated drugs, to wounds, ulcers, injuries or surgical sites.
useful as hyaluronan
                         New chondroitin synthase gene obtained from Pasteurella multocida,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             dependence, and different Km values compared with the HAS enzymes of Streptococcus equisimilis (see AAY06206) and Streptococcus pyogenes. Km values are about 2- to 3-fold lower for UDP sugars, and Vmax values are about 2- to 3-fold higher. The invention

The HS nucle acids can also be used to develop agents to block capsule synthesis pathogens and act as antibiotics. The avirulent P. multocida strains
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        containing the PmHAS nucleotide sequence which can be used to express PmHAS in a foreign host. The HS nucleic acids can be used for the production of HA. Also, specific changes to the HS coding sequence can result in the production of HA having a modified size distribution or structural configuration and functional properties. The HA products can be used in e.g. drug delivery, angiogenesis and wound healing,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       sequence. Hyaluronic acid (HA) or hyaluronan, is a polysaccharide that serves both structural and recognition roles in higher animals. Bacter produce extracellular capsules of HA which mimic their host HA and aid escape from a host immune response. The invention includes a vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               drug delivery;

No. is the number of results predicted by chance to have a
re greater than or equal to the score of the result being printed,
is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             seq
